

Security notice - Site break-in on 16-Jan-2021

Around 0400 GMT on 16 Jan 2021, an administrator account on the OpenWrt forum (<https://forum.openwrt.org>) was breached. It is not known how the account was accessed: the account had a good password, but did not have two-factor authentication enabled.

The intruder was able to download a copy of the user list that contains email addresses, handles, and other statistical information about the users of the forum. Although we do not believe the intruder could download the database, from an abundance of caution, we are following the advice of the Discourse community and have reset all passwords on the Forum, and flushed any API keys.

1. You will need to reset your password by MANUALLY typing the following link without spaces:
`https : // forum . openwrt . org`

Running one script at startup

imanf**Nov '18**

Hi all

I installed one usb over ip application called Virtualhere on 1043nd with mips architecture
it works great on openwrt but every time the router starts I should ssh to it and run

"./vhusbdmips"

please help me to do something that it starts automatically on startup

link of application:

https://www.virtualhere.com/usb_server_software

Best Regards

RFisMagic**Nov '18**

Put your startup commands in /etc/rc.local, or in Luci go to System/Startup. Scroll to the bottom
and put your commands there.

vgaetera Regular**Nov '18**

<https://openwrt.org/docs/techref/process.boot>

<https://openwrt.org/docs/guide-user/base-system/notuci.config#etrcrclocal>

imanf**Nov '18**

Thanks for your reply

I added this command "./vhusbdmips" but it does not work

please help

vgaetera Regular**Nov '18**

Use full path to the script.

Make sure script file is executable.

imanf**Nov '18**

please give me more instruction

when I ssh with root to openwrt I enter this command "./vhusbdmips"

now please tell what should I put in /etc/rc.local

Best Regards
